

POWER QUALITY Issue Log

Keep track of power quality events with this spreadsheet. Keeping a log of dates and times issues occur, along with specific symptoms and the equipment involved, can help expose the source of a problem.

Each time a power problem occurs, document the details as explained:

Device: The name you use to refer to the affected equipment.

Function: How is the equipment used?

Location: Where in your facility is the equipment located?

Symptoms: What are the affects of the problem? For example, data errors, flickering lights, audio static.

Events: Are there concurrent events such as weather changes or nearby equipment operations?

Factors: Possible promoting factors such as newly installed devices or overloaded or improperly grounded circuitry.
