

## Electric energy efficiency report card

Your efforts in saving electricity in 2016–17 have helped save you money while also delaying the need to purchase new power resources or constructing new electric generating facilities—making Puget Sound Energy customers leaders in energy efficiency. Every other year, we evaluate how effectively we do our part to encourage you to save energy.

We match the amount of energy saved against a set biennial target. During the last two years, your efforts helped to exceed the target by 5 percent. Thank you. Here are the results:

Key measurement	Target	2016–17 performance	Achieved
Electricity savings	605,194,000 kilowatt hours (kWh)	633,155,000 kWh saved—equivalent to serving more than 57,000 average residential homes in one year.	

If PSE missed the 2016-2017 electric conservation target by approximately 2.8% (or 17 million kWh), PSE could have incurred a penalty of up to \$1 million.
